📍 Paris, France

Profile

I'm a Full-stack Developer with a focus on React and Node.js, skilled at building functional and visually appealing websites. I also have experience with Python and Symfony, which I use to enhance back-end functionality. My interest in software architecture and DevOps helps me improve project workflows and system performance.

Professional Experience

Full-Stack Developer & Project Manager, *Daimler Trucks France* — 2021 Sep – 2024 Sep | Sarcelles, France

Developed diverse internal websites, significantly boosting operational efficiency across multiple departments.
Reworked the development workflow, achieving up to a 50% increase in development speed.
Efficiently managed the development team across three projects concurrently.
Assumed the role of front-end technical leader, guiding the team through my expertise and best practices.

- React, Symfony, Material UI, Git

Full-Stack Developer, *Stormshield* — 2020 Sep – 2021 Jun | Lille, France

Redesigned the company's website for overnight test monitoring, significantly enhancing data tracking and system stability.
Optimized website performance by implementing efficient coding practices and resource management, reducing load times by 25%.
Managed the entire website overhaul project independently, efficiently addressing and incorporating client feedback to meet specific operational requirements.

- Vue.js, Python, PostgreSQL, Git

Education

Master's Degree, *CESI* — 2021 Oct – 2024 Sep | Nanterre, France
Software Architect & Project Manager Degree

Develops leadership in software project management and innovation.
Enhances expertise in software architecture design and system integration.
